

Bio301D On-line Quiz 4 (2 unrelated articles)

For this quiz, you should look at a Guardian article criticizing an Oxford professor's news release and an article criticizing a study of the health effects of GMO foods on rats (links below). There will be one question about the Guardian article and 3 on the second study.

Some points about this assignment.

- 1) You are free to answer the questions while looking at the links. It will probably work best if you read first, then go back to the links while trying to answer.
- 2) You are expected to answer on your own.
- 3) You won't know if you answered correctly until after the due date. You should not see a score or be allowed retries (although Canvas is not terribly transparent to me in this respect).
- 4) When you log out, the system will not permit you back in. So answer everything before logging out.
- 5) The quiz and due date are on Canvas
