

Bio301D Canvas Quiz 6 ([links](#) at bottom of this page)

For the 6th Canvas quiz in Bio301D, you should look at an animated video (~ 11 min), in which someone speaks about education reform. There will be 3 multiple choice questions about that video, chiefly about correlations, causation, and data.

There is also a link to an article on a link between leukemia and feeding formula to babies. There will be 3 questions about the article.

- 1) Go over the video and article before you start the quiz (and make sure you find the first page of the article – sometimes the links take you into the middle).
- 2) You have one opportunity to take the quiz, so do not exit until you are done.
- 3) You are free to answer the questions while looking at the links.
- 4) You are expected to answer the questions on your own.
- 5) You won't know if you answered correctly until after the due date (the due date is given on Canvas). You should not see a score before then.
